The Goal of the app is to allow students to be able to adequately create a formal resume that will give them more opportunities in the job world or gain them a job they desire.

Our Features include:

1. Grammar Checker/Fixer
2. A Resume Builder
3. Status Visualizer

Simplicity is the main Solution for the app and from what I've seen as a student and as someone whose used apps before, simplicity will keep everyone happy. We can find ways to work around the overcomplication of some tasks to make everything be as basic as possible, so the forums won't have to be used as much or questions that arise from confusion. Keep a minimum of around 5 buttons on each page in order to maintain a simple and easy to use interface that will keep our users happy while still allowing them to adequately use the app.
